

Qualified Natural Gas Water Heaters with .62 or Higher Energy Factor

The ENERGY FACTOR is the measure of overall efficiency for water heaters. This measurement is based on three factors: 1) the recovery efficiency, or how efficiently the heat from the energy source is transferred to the water; 2) stand-by losses, or the percentage of heat lost per hour from the stored water compared to the content of the water, and 3) cycling losses.

Company	Trade Name	Model #	E.F.	Vol (Gal)
